EVALUATION FORM USED BY THE EXPERT REVIEWERS

The following evaluation records were designed for the assessment, by two human experts, of the restorations proposed by the algorithm **AGreekBert**, identified by uppercase letters

The numbering of the inscriptions follows the system adopted in the documents *Masked Texts for Evaluators* and *Masked Texts with Answers*, which also provide a brief description of each inscription, together with its provenance and dating

Each evaluation sheet includes a read-only scrolling field displaying the full text of the inscription, with the restoration under evaluation highlighted in red. In the case of texts 9 and 10, which contain two masked elements (identified respectively as A, B), only the specific restoration examined in the given evaluation sheet is highlighted in red

1A	σαμα τοζ ιδαμενευς ποιησα *h*ινα κλεος ειη ζευ δε νιν οστις ανιθεια <7-9> λειολη θειε		
Evaluation domain	**Evaluation question**	**Evaluation scale (0-2)**	**Score and comments (if any)**
Compatibility with the dialect (or macrodialect) and with local linguistic and alphabetic conventions	Is the proposed restoration compatible with the dialect (or macrodialect) of the inscription and with the linguistic and alphabetic conventions attested in the local epigraphic tradition?	0: not compatible 1: compatible 2: fully compatible (both linguistically and alphabetically)	0 0
Grammatical and syntactic plausibility (evaluated in two successive steps; the second step is assessed only if the first receives a score greater than 0)	Is the grammatical category of the proposed element (e.g. noun, verb, adjective) plausible in the given context?	0: not plausible 1: plausible 2: the only possible element	0 0
	If plausible, is the proposed element grammatically and syntactically consistent with the structure of the sentence?	0: inconsistent 1: partially consistent 2: fully consistent (both grammatically and syntactically)	
Semantic and contextual adequacy	Is the meaning of the proposed element, and the role it plays in the context (e.g. object, action, participant), appropriate for the type of inscription under examination? Is the lexical form appropriate to the language typically used in this type of inscription, independently of dialectal variation?	0: inappropriate or contextually implausible 1: partially appropriate 2: fully appropriate (in terms of meaning, contextual function, and lexical choice)	0 0

2A	μυσκον δαμιος του κορετου ανθεμοκριτος εφιετο απελιν ενγυασασθαι σομα δε εφα ειθαος <6-7> κατελαζετο τον λεοντινον ξενιν μυσκονα εν ται
